

HERE TO SUPPORT YOU

Phenomics Australia (formerly known as The Australian Phenomics Network , APN) provides researchers with the model systems necessary for preclinical **COVID-19** research.

-
- The Phenomics Australia suite of laboratories are fitted with state-of-the-art instrumentation and are committed to scaling up activity strategically in support of COVID-19 response and research.
 - The network is interoperable and can source reagents and materials, and expertise from around the country or overseas on a needs basis.
 - Our dedicated and professional technical staff are highly qualified and accustomed to sample handling, aseptic technique, service delivery and methodology development.
 - We have capacity to utilise commercially available animal resources or import them from global vendors to maximize the availability as well as expertise to develop “in-house” diagnostics and screening protocols to handle overflow in acute situations.
 - We also can offer project management services for complex research investigations for and with the research community and industry.

If you are working to fight the **COVID crisis**, please contact Phenomics Australia to assist with your research infrastructure needs at contact@australianphenomics.org.au
